Islam's brilliant contributions to science, art, and culture are a timeless and precious heritage which should be historically preserved for future generations. The great achievements of Muslim scholars are rarely, if at all, acknowledged in formal education, and today their identity, origins, and impact remain largely obscure. This collection of papers aims to give readers a brief introduction to the intellectual history of Muslims and the contributions that eminent Muslim scholars have made in certain specific fields of knowledge, including basic and applied physical and biological sciences, medicine, legal and political theories and practices, economic and financial concepts, models, and institutions, etc. The preservation of civilization necessitates a better understanding, sharing, and recognition of our common human heritage. Given today's widespread negative stereotyping and falsely generated misunderstanding of Islam and Muslims, the publication of these papers on Muslim contributions to world civilization is vital to help repair the wrong that is being perpetrated and restore the historical truth which is being distorted.

Studies in Islamic Civilization draws upon the works of Western scholars to make the case that without the tremendous contribution of the Muslim world, there would have been no Renaissance in Europe for almost a thousand years. Islam was arguably one of the leading civilizations of the world, spanning a geographic area greater than any other. It eliminated social distinctions between classes and races, made clear that people should enjoy the bounties of the earth provided they did not ignore morals and ethics, and rescued knowledge that would have been lost, if not forever, then at least for centuries. The genius of its scholars triggered the intellectual tradition of Europe, and for over seven hundred years, its language, Arabic, was the international language of science. Strange then that its legacy lies largely ignored and buried in time. In the words of Aldous Huxley, "Great is truth, but still greater from a practical point of view is silence about truth by simply not mentioning certain subjects." Propagandists have influenced opinion much more effectively than they could have by the most eloquent denunciations. Studies in Islamic Civilization is a compelling attempt to redress this wrong and restore the historical truths of a golden age that ushered in the Islamic Renaissance, and as a by-product, that of the West. In doing so, it gives a bird's-eye view of the achievements of a culture that at its height was considered the model of human progress and development.

this book first published in 1977 discusses the muslim contribution to mathematics during the golden age of muslim learning from the seventh to the thirteenth century it was during this period that muslim culture exerted powerful economic political and religious influence over a large part of the civilised world the work of the muslim scholars was by no means limited to religion business and government they researched and extended the theoretical and applied science of the greeks and romans of an earlier era in ways that preserved and strengthened man s knowledge in these important fields although the main object of this book is to trace the history of the muslim contribution to mathematics during the european dark ages some effort is made to explain the progress of mathematical thought and its effects upon present day culture certain muslim mathematicians are mentioned because of the important nature of their ideas in the evolution of mathematical thinking during this earlier era muslim mathematicians invented the present arithmetical decimal system and the fundamental operations connected with it addition subtraction multiplication division raising to a power and extracting the square root and the cubic root they also introduced the zero symbol to western culture which simplified considerably the entire arithmetical system and its fundamental operations it is no exaggeration if it is said that this specific invention marks the turning point in the development of mathematics into a science

lately islam has been enduring considerable pressure and criticism for its violent nature and its involvement with anti social activities such as terrorism assassinations suicide bombings etc some evidence of the growing awareness of islam and its efforts of peaceful co existence has come to light in the form of increased interest in reading history and about the past events this awareness is not sufficient the authors in their book globalization of knowledge have endeavoured to dispel this undue criticism in this treatise the authors have undertaken to illustrate islam and its efforts for creating and maintaining a peaceful

and harmonious global village they have also brought to the attention of the readers contributions of the islamic civilization to human knowledge particularly the preservation and further advancements in philosophy sciences astronomy and other social disciplines the book is an easy reading and full of information readers can learn vicariously from the islamic contributions to human knowledge
